

Magnetic Grid Systems used in flour industry

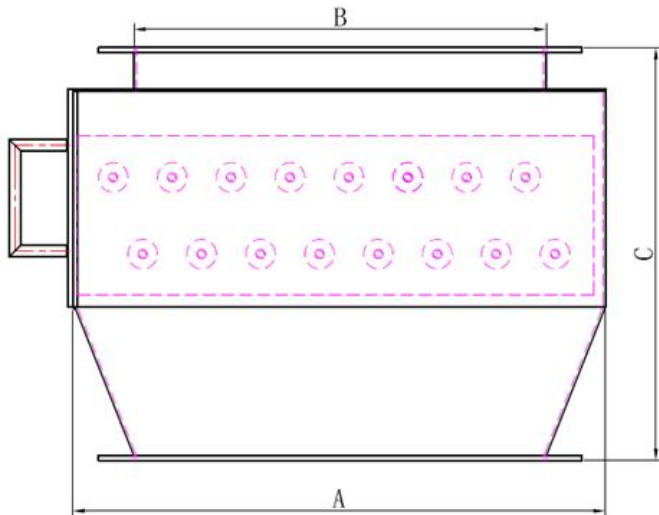

We have four matured product series for flour production: **Kernel separation devices**, **Wheat separation devices**, **Flour separation devices** and **Before packing separation devices**, which could extract iron particles from material to protect your product purity also prevent damage to your production equipments and facilities.

Features:

- Suitable for selecting granular, powder and flaky raw material;
- All parts of the device are food grade and waterproof;
- Have self-cleaning version available on request;
- High capacity material flow, reduce equipment space, also could prevent the problem of powder stick, clog and bridge;
- The dimension of material inlet and outlet adapters could be customized to fit your facilities, also could design efficient separate devices for you.

Before packing separation devices

- Suitable for selecting powder and flaky raw material.
- Optional for Easy clean-version or Manual-clean version.

Before packing separation devices					
ITEM No.	Dimensions (mm)		Material inlet (mm)	Processing Capacity (t/h)	Gauss Value (Gs)
	A×A	C	B×B	Flour density=0.50	
SCXF-10	400×400	350	300×300	8	>8000
SCXF-12	450×450	350	350×350	10	
SCXF-15	500×500	390	400×400	20	
SCXF-18	550×550	390	450×450	45	
SCXF-20	600×600	450	500×500	70
